#Pseudocode Practice Number of Stamps from Module 2 - Full Stack Development
#Author: Dammy Adebayo

#Program: NumberofStamps
#Description: The purpose of this program is to determine the amount of stamps
#             needed to send a letter. For every five (5) sheets in the letter
#             one (1) stamp is used. However, if the stamps exceeds
#             three (3) or letters exceed fifteen (15) then the letter will not be sent

#SET sheetAmount = 0 , stampAmount = 0

#INPUT number of sheets of paper from user or input device
    #save value as sheetAmount
    #IF sheetAmount is less or equal to 15
        #stampAmount is sheetAmount divided by 5
        #IF remainder of stampAmount does not equal to zero (0)
            #Round up stampAmount to nearest integer
            #PRINT ("The amount of stamps needed are", stampAmount)
        #ELSE
            #PRINT ("The amount of stamps needed are", stampAmount)
        #END IF
    #ELSE
        #PRINT ("Letter should not be sent, stamp amount will be exceeded")
    #END IF

#END Program
